

Ali Nasir

Data Scientist

✉ alinasirdawood99@gmail.com  Ali Nasir

PROFILE

Technology-driven Data Scientist with experience working on real-world, large-scale time-series datasets. Proven ability to analyse and report insights using Python, SQL, and Power BI, translating complex analytical outputs into clear, research-grade reports. Experienced in collaborating with engineers, researchers, and business stakeholders to ensure analytical solutions. Passionate about applying my expertise to sustainability-driven energy initiatives within global, cross-functional environments.

KEY SKILLS

Data Analysis & Transformation

Python, SQL, Pandas, Pyspark

Data Visualisation

Power BI (Desktop & Report Builder), Canva

Cloud Technologies

Microsoft SharePoint, Power apps, Power Automate, Databricks

Improvement Frameworks

Kaizen, Agile Methodology

Programming & Scripting

Python, HTML/CSS

Project Management

Microsoft Planner, Jira

PROFESSIONAL EXPERIENCE

AI Engineer, PwC

01/2025 – Present | Pakistan

- Developed a Power BI dashboard for the Customer Service team, reducing complaint resolution time by 65% based on CSAT score, providing real-time insights to the Board of Directors
- Managed data reporting workflows using Power Automate and SharePoint, reducing manual effort by 90%, resulting in faster report generation with improved data accuracy.
- Led the implementation of Agile methodology for continuous team development, using Planner to track and manage daily sprints, improving team productivity by 70% based on feedback from team reviews.
- Communicated reports and presentations for department heads and the Board of Directors, providing performance metrics that drive strategic decisions

Data Scientist (Research Dissertation), SSE plc

01/2025 – 08/2025

Glasgow, United Kingdom

- Designed Databricks dashboard to analyse 4 years of turbine data, providing insights into site behaviour across multiple wind farms in Scotland, improving decision-making.
- Developed and implemented an ETL pipeline on Azure Databricks using PySpark to ingest and process 40M+ records/month from 75 turbines, achieving 92.8% data accuracy data for analysis.
- Communicated daily updates during scrum meetings, proactively resolving 60% of blockers within 2 hours, enhancing collaboration across 2+ cross-functional teams through Azure Active Directory.
- Led bi-weekly sprints with both technical and non-technical stakeholders, incorporating feedback to refine deliverables, achieving a 25% reduction in post-sprint revisions

Data Engineer (Team Lead), Xloop Digital Services

01/2023 – 01/2024

- Built a Generative AI-based product for smart legal document review and signing using Lang Chain, cutting manual review time by 40%, accelerating contract management
- Processed and transformed over 5 million patient records using PySpark on Azure Databricks, improving data quality and reducing batch processing time by 75%
- Created a detailed project management plan aligned with IEEE 830 standards, accelerating stakeholder approvals by 75% and ensuring scope alignment across a 3-month roadmap
- Led weekly sprint meetings to ensure project execution and drive timely delivery of key milestones throughout the project lifecycle, increasing client satisfaction by 90% based on the CSAT.

Data Analyst, PILL

06/2021 – 12/2023

- Developed an analytical Power BI dashboard to centralise and visualise research data, reducing literature search time by 75% and accelerating data-driven decision-making in qualitative research
- Identified and resolved data anomalies across key research data, improving data lineage, increasing research reliability by 85%, and enabling traceable evidence for academic outputs
- Designed a mental health chatbot utilising LSTM algorithms to identify mental health concerns and offer coping strategies. The chatbot achieved a 95% patient satisfaction rate based on the PSQ-18 survey
- Engineered a Power BI dashboard using real-time hospital database metrics to track KPIs across 4 departments, improving patient care response metrics by 70%
- Led in-depth focus groups and qualitative interviews with a diverse group of part 15 participants to design an innovative mental health application, ‘Tech Care for Psychosis’, aimed at improving psychosis treatment.

EDUCATION

Msc in Advanced Computer Science with Data (Distinction),

2024 – 2025 | Glasgow, United Kingdom

University of Strathclyde

- **Core Modules:** Business Analytics, Machine Learning for Data Analytics, Advanced Software Engineering, Deep Learning Theory and Practice
- **Dissertation:** "Improving Data Quality for Wind Power Forecasting" – Improving data utilisation across multiple wind sites in Scotland

Bachelors in Software Engineering (Distinction),

2018 – 2021 | Karachi, Pakistan

University of Karachi

- **Core Modules:** Relational Database Management System (RDBMS), Artificial Intelligence in Software Engineering, Software Project Management, Data warehousing & data mining
- **Dissertation:** Developed a Recruitment Management Application Tracking System that reduced manual tasks by 60% and enhanced recruitment efficiency

LEADERSHIP & EXTRACURRICULAR ACTIVITIES

Strath Inspire - University of Strathclyde, Entrepreneur

- Led the development of a decentralised energy platform, empowering local communities to store and trade surplus solar energy, accelerating global decarbonization efforts

PILL, Research Analyst

- Volunteered with PILL on a women’s mental health research project, coordinating participants and clinicians to provide access to mental health.
- Volunteered on a PILL project addressing paternal postpartum depression, providing first-line support to patients and collaborating to improve referral and follow-up processes.
